Institution: Christ University

Date of Submission: 11/08/2025

ABSTRACT

This project focuses on designing and developing a visually engaging and responsive website about New York City using only HTML and CSS. The website highlights key aspects of the city, including its culture, landmarks, cuisine, events, and attractions, accompanied by rich imagery and a clean, structured layout. The primary goal is to create an informative, user-friendly platform that effectively conveys the essence of NYC while maintaining aesthetic appeal and readability. Core technologies include semantic HTML5 for content structure and CSS3 for styling, layout management, and responsive design. The final outcome is an accessible, mobile-friendly site that can serve educational, tourism, or informational purposes, offering visitors an immersive visual and textual guide to one of the world's most iconic cities.

OBJECTIVES

- Design a user-friendly interface following modern UI and UX principles.
- Develop a fully responsive website layout using only HTML and CSS.
- Implement structured HTML5 semantic elements for clear content organization.
- Apply CSS styling to establish branding, control layout, and enable responsive behavior.
- Integrate high-quality images and media to enhance visual appeal.
- Ensure accessibility, readability, and compatibility across various devices and screen sizes.
- Present New York City's culture, attractions, and events in an engaging and informative manner.

SCOPE OF THE OBJECT

- Focused exclusively on front-end design and development.
- Built using only HTML5 and CSS3.
- No JavaScript, frameworks, or server-side integration.
- Optimized for desktop, tablet, and mobile viewports.
- Ensures responsiveness and accessibility across devices.
- Uses only open-source tools and pure code (no libraries or templates).
- Features structured content and high-quality images about New York City.
- Covers NYC's culture, attractions, events, and lifestyle.
- Excludes backend functionality, interactive features, and dynamic content.

TOOLS AND TECHNOLOGIES USED

Tool/Technology	Purpose
HTML5	Markup and content structure
CSS3	Styling and layout management
VS Code	Code editor
Chrome DevTools	Testing and debugging

HTML STRUCTURE OVERVIEW

- Used semantic HTML5 tags: <header>, <nav>, <main>, <section>, <footer>.
- Homepage divided into thematic sections: Introduction to New York City, Popular Attractions, Cultural Highlights, and Contact Information.
- Navigation menu created with and <a> tags for quick access to each section.
- Integrated tags to display high-quality images of New York City.
- Applied headings (<h1>, <h2>, <h3>) for clear content hierarchy.
- Utilized <p> for descriptive text content.
- Included <footer> for credits and copyright.

CSS STYLING STRATEGY

- Used an external CSS file (style.css) for all styling.
- Organized styles with section-wise grouping for easier maintenance.
- Techniques used:
 - Flexbox for arranging navigation menu and content layout.
 - Background images and background-size: cover for aesthetic appeal.
 - Media Queries to ensure responsiveness across desktop, tablet, and mobile.
 - Hover effects on links and buttons for interactive feedback.
 - Custom font styles and text shadows for improved readability.
 - Consistent color scheme for visual branding of the New York City theme.

KEY FEATURES

Feature	Description
Responsive Design	Adapts seamlessly to all screen sizes
Smooth Navigation	Fixed top navigation bar with anchor links for quick section jumps.
Project Cards	Flex-based layout with hover effects
Contact Form (non-functional)	Placeholder layout for inputs and button
Accessible Fonts & Colors	High contrast and readable typography

CHALLENGED FACED AND SOLUTION

Challenge	Solution
Overlapping elements on small screens	Used media queries to stack elements
Difficulty aligning items using float	Shifted to Flexbox and Grid
Typography scaling issue	Used relative units (em/rem) instead of px

OUTCOME

- Achieved a clean, consistent, and visually engaging front-end layout.
- All key components work as intended using only HTML and CSS.
- Improved understanding of layout responsiveness, semantic HTML, and UI hierarchy.

FUTURE ENHANCEMENTS

- Add JavaScript for interactivity (form validation, dynamic content).
- Integrate more advanced animations and transitions for better user engagement.
- Connect to a backend for functional contact form submissions.
- Implement a theme toggler for light/dark mode customization.

SAMPLE CODE

# SCREENSHOTS OF FINAL OUTPUT

The NYC Journal homepage features a large, dark-toned photograph of the Palace of Westminster and Big Ben in London. The title "New York City" is centered in white text, with a subtitle "Skylines, street life, and culture—discover the city in motion." Below the main image are three cards: "Central Park" (lakes, lawns, quiet paths), "Cuisine" (pizza slices, bagels), and "Gallery" (curated grid of scenes). Navigation links include "Explore Attractions" and "View Gallery".

# CONCLUSION

This personal portfolio website showcases the user's skills, projects, resume, and contact form.

This mini project strengthened my front-end development skills using only HTML and CSS. I gained practical insights into responsive design, layout structuring, and user interface aesthetics. The hands-on implementation of design principles enhanced my understanding of user-centric web design.
